

Antiparasitic Line  
for *Dogs and Cats*

Our pets can be parasitized by fleas, ticks, mosquitoes, mites and lice.

The Vetfield® brand is positioned as a range of Medicines for Veterinary Use, suitable for daily use to protect our faithful friends.

# Antiparasitic collar VETFIELD®

The Vetfield® antiparasitic collar is recommended for the treatment against external parasites, in dogs and cats, caused by fleas and ticks. The dog collar has two sizes, 60 cm for large breeds and 40 cm for small breeds. The cat collar is about 33 cm. Both are composed of 15% dimpylate. The active substance is slowly released from the surface of the collar, depositing on the animal's hair and coming into contact with the parasite. Fleas die in a few hours and ticks in 5 days. The collar must be used continuously for a period of 4 months.

After this period, it must be replaced by a new one, to guarantee the protection of the animal against parasites.

# Antiparasitic Spray VETFIELD®

The Vetfield® antiparasitic spray is recommended for the treatment of external parasites in dogs, caused by fleas, ticks, lice and mites. Each bottle contains 150 ml, consisting of 0.22% tetramethrin and 1.1% piperonyl butoxide. You should spray the animal's body at a distance of 30-40 cm, until the coat is moist, but not wet. For correct use, you must spray so that the product penetrates the lower layers of hair. Treatment should be repeated every 5 days, if necessary. Vetfield® Spray can be used on animals from 12 weeks of age.

# Antiparasitic shampoo VETFIELD®

The Vetfield® antiparasitic shampoo is recommended for the treatment against external parasites in dogs, caused by fleas, ticks, lice and mites. Each bottle contains 200 ml of shampoo, comprising 0.04% tetramethrin and 0.4% piperonyl butoxide. You should moisten the animal's fur with warm water, spread a portion of antiparasitic shampoo on the fur and rub energetically. Rinse with plenty of water and repeat the operation. Before rinsing a second time, let it act for a few minutes. Treatment should be done 2-3 times a year or once a month, depending on the degree of parasitism.

## Antiparasitic collar VETFIELD® PLUS

The Vetfield® Plus antiparasitic collar is recommended for the elimination of fleas, ticks and lice in dogs, and prevention of new invasions for 4 months. The collar has three sizes: small, medium and large breeds, and is composed with 10% permethrin. The active substance is slowly released from the surface of the collar, depositing on the animal's hair, coming into contact with the parasite and eliminating it. The collar must be used continuously for a period of 4 months and must be removed after the period of use. The Vetfield® Plus antiparasitic collar should not be used on puppies under 7 weeks of age.
